

Why use a CSA Qualified Facility for my Flygt explosion proof pump?

GENUINE FLYGT PARTS, CSA QUALIFIED FACILITY REPAIR CHECKLIST & WARRANTED FOR 12 MONTHS

CSA Qualified Facilities

In today's lean times, municipal budgets are often stretched to their limit. Frequently, it is difficult to justify paying more for a pump repair, especially when many third party operations offer lower labor rates. However, there are benefits to using factory authorized repair centers that often go overlooked, particularly when the pump in question is CSA XP approved.

Many Xylem branches across Canada are CSA Qualified Facilities, able to repair Class 1, Div. 1 rated Flygt pumps, and ensure that they are returned to their original factory condition.

In order to achieve a genuine and validated CSA XP repair on a Flygt pump, the following must take place:

- All repair work must be completed in a CSA Qualified Facility (insist the serviced product is identified with a Qualified Facility label)
- The Qualified Facility must have access to the manufacturers CSA XP approval drawings
- Repair work must be completed using measuring instruments that have been calibrated within the last year (the Qualified Facility must be able to produce this documentation)
- All CSA XP parts that are disassembled and reassembled during a repair are measured twice to ensure their suitability (the service provider must provide copies of the documentation recording ALL measurements)
- Only Genuine Flygt Parts can be utilized

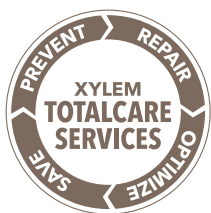

The following benefits also are provided when using a CSA Qualified Facility:

- Only Genuine Flygt Parts will be utilized during the repair work
- Flygt's exact tolerances and quality are maintained
- Repairs are warranted for 12 months from time of repair
- Supporting documentation of a CSA XP repair is recorded as proof of the flame path integrity
